site

Tired of fighting Joomla, Drupal and Word Press?

SiteBlox CMS | Simple. Hosted. Supported.

SiteBlox CMS unchains you from high maintenance in-house or open source CMS platforms and allows you to focus on revenue generating projects – no more wasted time and resources on problem solving, troubleshooting, patching or upgrading an in-house solution.

SiteBlox is the Enterprise class CMS platform built for businesses of all sizes, shapes and kinds. Flexible, robust and scalable in both size and functionality, it is an out-of-the-gate SaaS powerhouse for updating and managing content across various online activities – websites, social media, blogging, commerce, event registration and fundraising among others.

Our Solution Includes:

Content Management | Consisting of base content types – news, events, bios, services, blog entries and other customizable types – SiteBlox can be extended and modified to meet your business and user needs with little effort. No matter how complex and large your site becomes, it retains its seamless scalability. Amazingly enough, with all these possibilities under its hood it remains simple for the tech savvy and non-savvy to administer.

Theme Management | Branding is a primary, and not a secondary or tertiary consideration when it comes to your online presence. SiteBlox places no limitations when it comes to visual identity, shunning prefabricated themes and templates. With the ability to customize each component of your design, the possibilities are close to endless.

Form Creation and Management | Define any website form with whatever fields you please – SiteBlox's form creation is elastic enough to handle almost anything. You can quickly create and archive new forms and also access and export completed forms from the database. It is even possible for form data to be routed to your third-party CRM, email and contact systems to streamline data management.

Locator | SiteBlox also possesses the ability to map your business' multiple locations so your services can be found in the physical world. Zip code and longitude/latitude-based searches are a breeze, as is the integration of Google and Bing mapping services.

Customization | If there is an additional feature you need, no worries. SiteBlox is purposely built to incorporate and adapt to new elements.

Vertical Specific Functions:

Commerce | SiteBlox's commerce module is the entire package for online purchasing. It delivers an intuitive shopping and checkout experience for end users. And it provides a thorough product management tool, allowing for definitions of product types, products and SKUs, plus a taxonomy hierarchy for classifying products and allowing for faceted navigation of your catalogue. Currently, SiteBlox integrates with PayPal and Authorize.net

Event Registration and Management | Creating and managing event-specific registration forms is a straightforward task when undertaken with SiteBlox. Even events requiring payment options are relatively effortless, regardless if it is fixed or variable pricing. Your registrations are captured and accessed in a database and cleanly exportable to spreadsheets. Automated email reminders and confirmations can be generated, too.

Charitable Donations | For non-profits wanting full and secure credit card processing for online donations, SiteBlox has that functionality already built in. And its benefits for organizations extends further – sending automated acknowledgement receipts and tying into CRM tools such as Constant Contact and Emma.
